SUMMARY

<p>Subject of the Contract:</p>	<p>Construction works consisting in the comprehensive provision of flood protection for the city of Sandomierz and surrounding areas were executed under the Works Contract 3B.1 (3B.1/1). The Contract encompassed 6 subtasks:</p> <ol style="list-style-type: none"> 1) Subtask 1 - Flood protection within the mouth section of the Atramentówka River, construction of a new "Kocmierzów" pumping station and of a gravity-type dam lock in Kocmierzów (on the right embankment of the Vistula River) and of a channel draining water from the Atramentówka River to the pumping station. 2) Subtask 2 - Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station. 3) Subtask 3 - Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the city of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzów embankment 4) Subtask 4 - Protection of the embankments of Koprzywianka River - left embankment at km 0+000 ÷ 12+900, right embankment at km 0+000 ÷ 14+400. 5) Subtask 5 - Construction of the water pumping station in Szewce. 6) Subtask 6 - Expansion of the water pumping station in Zajeziarze.
<p>Completion date of Investment implementation (completion date of works):</p>	<p>December 30, 2023</p>
<p>Date of awarding "NO" for LARAP:</p>	<p>LARAP - December 29, 2016 Supplement no. 1 - December 16, 2020 (concerned determining the rules for acquiring one property for the construction of a flood gate in the tributary channel to the River Port in Sandomierz) Supplement no. 2 - November 15, 2022 (concerned the determine of the principles for the payment of compensation to the owner of the plot on which a building structure is located - a garage used for household purposes, to which access will be restricted as it is necessary to perform construction works consisting in the construction of a retaining wall in the edge of the roadway and the reprofiling of the asphalt of Zarzekowice Street and in the construction of a walkway between the asphalt roadway and the retaining wall)</p>
<p>Permanent land acquisition (Number and category of PAPs):</p>	<p>230 PAPs – private individuals and local government units, owners and co-owners of properties and permanent seizure of land</p>
<p>Number and category of PAPs affected by permanent restrictions:</p>	<p>Natural persons: 135 Local government units and State Treasury: 4 - (95 plots)</p>
<p>Sum of compensations disbursed to PAPs:</p>	<p>PLN 1,145,533.27 – monetary compensations in the amount of the replacement value of assets lost by PAPs, including court deposits.</p>

Number of properties and ownership class:	233 properties: 135 - private properties, 24 - commune properties, 74 - State Treasury properties,
Area of land permanently acquired	93,6949 ha
Number of properties and property ownership, temporary impact:	Total: 161, Natural persons: 99 Local government units and State Treasury: 62
Court deposits	23 court deposits (including permanent restrictions - 10 court deposits)
Key issues:	<ul style="list-style-type: none"> - in connection with expropriations, payment of compensation for land and constituent components in the amount of the replacement value, - in connection with permanent restrictions for properties, payment of compensation for establishing permanent restrictions in the use of properties: <ul style="list-style-type: none"> · 46 cases involving real estate with permanent limitations were settled on the basis of appraisal reports prepared and protocols agreed on the amount of compensation signed by the parties; · 32 cases were forwarded to the Świętokrzyskie Voivode of which, in 22 cases, during the proceedings it was possible to identify persons entitled to compensation, in 8 cases, the Voivode ruled on the need to direct the compensation in full to the court deposit, and in 2 cases, the co-owners of the plot were established and the remaining part of the compensation was ordered by the Voivode to be transferred to the deposit; - in connection with temporary occupation, settling the issue of using such properties, monitoring of the manner of use and time of occupation and clarifying the status after finishing the use;
Key achievements:	<ul style="list-style-type: none"> - compensations were paid to the former owners/co-owners for the land and for all components and plantings, and if the legal status was unsettled, compensation was placed to the court deposit, - part of compensations for permanent restrictions on properties were paid, - in cases where it has not been possible to establish and pay compensation, applications were submitted to the Province Governor of Świętokrzyskie to establish the amount; after conducting an administrative proceeding and issuing an administrative decision, compensation will be paid in the manner as specified in the decision, - The use of temporarily occupied properties was finished; this use has taken place in accordance with the provisions of the signed settlements. There were no objections as to the condition of the properties after the end of use and all obligations were fulfilled;
Unresolved issues and negative impacts of Task implementation:	Part of compensations for permanent restrictions were not paid – applications were filed with the Province Governor of Świętokrzyskie to determine the amount of compensation in such cases. No negative results. 32 applications were filed altogether.

1. INTRODUCTION

The area of the right-bank part of the city of Sandomierz is protected with flood protection embankments whose condition and protective capacity were verified during the flood of 2010 (the largest in the history of this region) causing flooding of the right-bank part of the city and large-scale damage.

Photo 1. Archive photo, flood in Sandomierz in 2010.

The flood has necessitated measures to improve the flood protection system and to adjust the protection measures to the flow of great waters. No protection measures were required for the left-bank part of Sandomierz, as it is located on the hill. Six subtasks were implemented under Contract 3B.1. The system of flood protection embankments was modernised along with the necessary modernisation of the system of pumping stations protecting the areas beyond the embankment during the runoff of great waters. The implemented investment task (*Contract 3B.1, and after changing the Contractor due to a consortium member's bankruptcy, Contract 3B.1/1*) has effectively increased the flood protection of the right-bank part of Sandomierz by draining the area within the forks of the Vistula River and Trześniówka River and the Vistula River and Koprzywianka River and by protecting the housing estate and the Glassworks (one of the main employers for local residents) from flooding from the Vistula River. The protection of the Koprzywianka River's valley against flooding has also enhanced and the protection against partial inundations has improved. The risk of flood occurring in the villages of Zajeziórze, Szewce and Sońniczany and the surrounding areas has also been diminished. At present, these areas are protected from the effects of the runoff of increased water masses with modern flood management measures constructed as part of the completed investments, i.e. Contract 3B.1 and Contract 3B.1/1.

The aim of the Final Report on the Implementation of the Land Acquisition and Resettlement Plan (FR LARAP)¹, prepared in accordance with the requirements of the *Project Operations Manual* and the *Land Acquisition and Resettlement Policy Framework*, is to document the process of land acquisition and to assess if it meets the requirements under OP 4.12, or whether there are any corrective actions that still need to be taken.

In line with the assumptions made in the Land Acquisition and Resettlement Action Plan, an ex-post evaluation was made about six months after implementation of the LARAP and it confirms that its objectives have been principally met and properly documented. It is concluded that the measures described in the LARAP have been implemented and that each entity affected by the project (family, individuals, legal entities) have obtained compensation and their standard of living has improved or at least been restored, and certainly has not deteriorated. Activities are still being pursued at present to pay compensation for the establishment of Permanent Restrictions for plots with an unsettled legal status and for which the owner could not be established.

This Report presents an account of the implementation of the measures planned in the LARAP for *Works Contract 3B.1 (3B.1/1) Flood protection of Sandomierz*, implemented as part of the *Odra-Vistula Flood Protection Project (OVFMP)*, co-financed by the International Bank for Reconstruction and Development (World Bank or WB), Council of Europe Development Bank (CEB), and the State Budget and from a grant received from the National Fund for Environmental Protection and Water Management.

The task was executed on the area of three communes of the Poviát of Sandomierz in the Province of Świętokrzyskie, i.e. on the area of: the Commune of Sandomierz, Commune of Samborzec and Commune of Koprzywnica.

Location of the investment is presented in the attached graphical attachment (Appendix no. 1 to this document).

Key Contract performance dates:

Date of signing the Contract with Contractor	08/08/2017
Date of handing over the Construction Site:	11/14/2017 (subtask 1)
	10/31/2017 (subtask 2)
	11/06/2017 (subtask 3)
	11/07/2017 (subtask 4)
	10/30/2017 (subtask 5)
	10/30/2017 (subtask 6)
Commencement date of Works:	11/17/2017
Completion date of Works:	12/30/2022
End date of the Quality Guarantee and Warranty Period:	12/31/2023

The scope of the implemented investment consisted of 6 subtasks:

Subtask 1 - Flood protection within the mouth section of the Atramentówka River, construction of a new "Kocmierzów" pumping station and of a gravity-type dam lock in Kocmierzów (on the right embankment of the Vistula River) and of a channel draining water from the Atramentówka River to the pumping station.

¹ <https://odrapcu.pl/projekt-opdow/dokumenty-opdow/>

Subtask 2 - Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station.

Subtask 3 - Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the town of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzow embankment

Subtask 4 - Protection of the embankments of Koprzywnianka River - left embankment at km 0+000 ÷ 12+900, right embankment at km 0+000 ÷ 14+400.

Subtask 5 - Construction of the water pumping station in Szewce.

Subtask 6 - Expansion of the water pumping station in Zajeziorko.

Table 1. Parameters of the embankment after extension.

Characteristic parameters	Value
Length of reconstructed embankment	30,815 m
Width of the crest (for the crest without transport route)	4.0 m
Width of the crest (for the crest with transport route)	3.5 m ÷ 5.0 m,
Upstream slope inclination	1:2 ÷ 1:2.5
Downstream slope inclination	1:2
Width of service belt	4.0 ÷ 8.0 m

The implemented extension of embankments has increased the flood safety in the area of three communes of the Poviát of Sandomierz, i.e. the Commune of Sandomierz, Commune of Samborzec and Commune of Koprzywnica and provided flood protection for ca. 11,958 residents living in an area of ca. 1,120 ha.

Properties had to be acquired to implement the project which is linear in nature (extension of the existing embankment and accompanying infrastructure), but did not result in the physical or economical resettlement of households. Small parts of properties of natural persons were taken over for the benefit of the State Treasury, including agriculturally used land (arable land and meadows) with their area ranging from 4 m² to approx. 4,108 m². These areas cannot be considered as generating any income that is an opportunity to ensure the existence of a household. All cases of occupation above 10% were subject to socio-economic studies, which confirmed that the impacts generated by the Project are insignificant, as households either do not make a living from farming or have a much larger area they farm and the expropriation area represents less than 10% of the area of the entire farm. In no case were built-up parts of properties (e.g. built up with residential, farm or other buildings) subject to occupation. No vulnerable groups were identified during the studies.

Moreover, the legal status of properties was settled as a result of implementing the Subtask 2 under the investment. Permanent Restrictions have been established on some plots actually occupied for the location of a watercourse. On this part of the plots, the owners could not cultivate agricultural crops, therefore compensation was paid to the owners of agricultural properties for parts of the property occupied for water facilities (Struga A watercourse) in situations where, in connection with the construction of the watercourse, the properties did not generate any income, and even burdened the household budget of the farms, e.g. with an annual tax on these properties. The investment executed under this subtask consisted of desludging and clearing the existing Struga A watercourse, which

turned out to be located on parts of plots belonging to private persons. Until the investment project implementation permit in the scope of flood protection facilities was obtained for the task titled: "Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station", the legal status of some of the plots occupied in the 2nd half of the 20th century for the construction of the watercourse remained unresolved. The extreme parts of the property were taken over for the construction of a watercourse managed by a state body, no expropriations were carried out and the water facility was located on plots of private persons, who were not paid any compensation at that time. The legal status of the properties was successfully settled by obtaining the investment project implementation permit and by executing Contract 3B.1 (3B.1/1), and the PAPs have received appropriate compensation for these fragments within the framework of Permanent Restrictions in the manner of use on parts of the properties occupied for the course of the Struga A watercourse. Parts of the plots that had already been occupied for more than ten years and on which the Struga A watercourse bed had been arranged did not generate revenue for the PAPs, so the insignificant impact of the Project was consequently indicated in these cases. The non-significant impact of the project concerned the establishment of permanent restrictions and permanent occupations on an area of less than 10 % of the plot. Monetary compensation was paid as part of the compensatory measures. As part of Subtask 2, insignificant impacts consisted in clearing and cleaning the existing watercourse on the plots of private persons, and making new access roads from the public road to the plots. For the occupation of the plot for the watercourse, the compensation mentioned above was paid. All other impacts were also insignificant, with no impacts identified in any case in terms of, inter alia, loss of sources of income, jobs, accessibility to infrastructure, loss of farming opportunities, loss of enjoyment of natural assets, access to parks, reserves, access to educational institutions, cultural facilities, etc.

The implemented investment has had a positive social impact. The safety of both the health and lives of PAPs and the protection of their assets, workplaces from the catastrophic impact of the Vistula spill and flooding have been increased.

The local community also had a very positive attitude towards the implemented project during the execution of works, because the works conducted, including the extension of the embankment as already noted above, have increased the safety of their lives and assets from the effects of floods likely to occur in the future. Requests were submitted to introduce technical solutions to improve the conditions of use of the road system associated with the embankments being extended, most of which were resolved positively, which represented additional minimisation/compensation measures. The local community was constantly kept informed, and a consultation point was maintained, where it was possible to find out about the ongoing progress of construction works and to make any requests or comments. The 4 complaints filed are described in detail in Chapter 5. All complaints were handled in a manner that took into account the interests of the residents. Mitigating measures were taken by planting additional vegetation and appropriate changes were made to the design documentation.

Listed below are addresses of websites where information on the implementation of this Task is published. All the tasks implemented and planned for implementation have a huge social impact by providing flood protection for this area:

- a) <https://ochronasandomierza.pl>
- b) www.gov.pl/web/infrastruktura/lepsza-ochrona-przeciwpowodziowa-sandomierza
- c) www.pois.gov.pl/strony/wiadomosci/wzmocniona-ochrona-przeciwpowodziowa-sandomierza

2. SUMMARY OF MAIN ACTIVITIES EXECUTED UNDER THE CONTRACT

2.1. Overview of the Project's objective.

811 communes and nearly 1.4 thousand businesses suffered losses across Poland as a result of the 2010 flood. More than 18,000 residential buildings and almost 1,000 educational facilities were destroyed. The flood destroyed 10,000 km of roads and 1,600 bridges and culverts. The disaster affected 105,000 farms. 683,000 hectares of land were flooded. Losses caused by the flood were estimated at around EUR 2.9 billion. The flood caused significant damages to private and public assets as well as road and sewage infrastructure in the area where *Contract 3B.1 (3B.1/1) Flood protection of Sandomierz* was implemented. The neighbouring communes of Samborzec and Koprzywnica were also affected by the effects of the flood. The flood in 2010 had caused significant damages to households in the area protected by the embankments that were reconstructed under Contract 3B.1 (3B.1/1). The completed project has significantly improved the flood protection of the City of Sandomierz, the Sandomierz housing estate and the glassworks against flooding. The project has additionally secured the Koprzywianka valley against flood and has improved the protection against flooding and decreased the flood risk in the villages of Zajeziorko, Szewce and Sośniczany. It has also secured the surrounding adjacent areas.

Photo 2, 3. Archive photos - flood in Sandomierz in 2010.

Photo 4, 5. Archive photos - flood in Sandomierz in 2010.

By implementing the Works Contract 3B.1 (3B.1/1), the area of the commune of Sandomierz, Samborzec and Koprzywnica, where housing development and technical infrastructure have developed significantly since 2010, has now been protected from flooding.

2.2. Legal changes related to the Investor status.

The Act of July 20, 2017, Water Law, came into force on January 1, 2018, and it modified e.g. the previous structure of water management units and rules. New provisions were enacted mainly to fully implement the Water Framework Directive into the Polish legislation. In the place of the existing structure of government administration, which was the National Water Management Authority and its subordinate regional water management authorities, as territorial units, and in the place of Provincial Boards for Amelioration and Hydraulic Structures, located within the local government's structure, the State Water Holding Polish Waters was established, whose task is to manage all broadly understood issues related to water resources in Poland, including investments. The Polish Waters is a state legal person in accordance with Article 9(14) of the Public Finance Act of August 27, 2009.

The Polish Waters comprise the following organisational units: National Water Management Authority with its seat in Warsaw, regional water management authorities, drainage basin administrations and water surveillance units. A detailed catalogue of duties and powers, together with the division of competences between the individual above-mentioned units, is determined in Article 240 of the Water Law.

The legislator, in the Water Law act of July 20, 2017, regulated in Article 536 the matters concerning transferring to the Polish Waters the rights and obligations from agreements (including agreements financed or co-financed from foreign funds) and decisions concerning investment projects on public waters owned by the State Treasury and basic water amelioration structures, implemented so far by regional water management authorities, provinces, provincial marshals or relevant provincial organisational units. It should be pointed out that all the receivables, liabilities, rights and obligations of the previous National Water Management Authority and regional water management authorities became, respectively, the receivables, liabilities, rights and obligations of the Polish Waters. A statutory general succession from the existing regional authorities to the Polish Waters has therefore taken place.

The task described in this Report was exercised until December 31, 2017 by the Marshal of the Świętokrzyskie Province, whose tasks were exercised by the Świętokrzyskie Board for Amelioration and Hydraulic Structures, and since January 01, 2018, the task has been exercised by the State Water Holding Polish Waters, which fulfils the ownership rights on behalf of and for the State Treasury. The Regional Water Management Authority in Cracow is an internal organisational unit of the Polish Waters and has acted in the name and on behalf of SWH PW as the Project Implementation Unit when implementing this Task.

The legal changes described above did not influence the regulations on the acquisition of properties, determination of the form and amount of compensation and payment of compensation.

Properties were acquired under the provisions of the Special Flood Protection Act and the Act on Real Estate Management. The Project Implementation Unit, when implementing this Task, has also applied all the principles resulting from the World Bank's Operational Policy OP 4.12, as well as the procedures of conduct indicated in the *Resettlement Policy Framework* and *Land Acquisition and Resettlement Action Plan*.

2.3. Information on administrative actions taken by the Investor and civil actions by the Contractor, on decisions obtained and on the status of their implementation.

For the Task in question, the Investor has obtained the following decisions in the area of a permit for execution of works and real estate issues:

1. On December 22, 2014, decision no. 184/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.10.2014) issued for Subtask 1 "*Flood protection within the mouth section of the Atramentówka River, construction of a new "Kocmierzów" pumping station and of a gravity-type dam lock in Kocmierzów (on the right embankment of the Vistula River) and of a channel draining water from the Atramentówka River to the pumping station*". The decision became final.
2. On February 11, 2015, decision no. 23/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.14.2014) issued for Subtask 2 "*Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station*". The decision became final.
3. On December 17, 2015, decision no. 134/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.14.2014) issued for Subtask 3 "*Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the town of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzow embankment*". The decision became final.
4. On May 07, 2014, decision no. 70/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.19.2013) issued for Subtask 4 "*Protection of the embankments of Koprzywianka River - left embankment at km 0+000 ÷ 12+900, right embankment at km 0+000 ÷ 14+400*". The decision became final.
5. On December 17, 2015, decision no. 135/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.19.2015) issued for Subtask 5 "*Construction of the water pumping station in Szewce*". The decision became final.
6. On September 15, 2015, decision no. 110/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IN-II.7840.3.10.2015) issued for Subtask 6 "*Expansion of the water pumping station in Zajeziorko*". The decision became final.
7. On April 28, 2022, decision no. 12/2014 of the Province Governor of Świętokrzyskie for an investment project implementation permit in the field of flood protection structures (IPIP) (ref.: IR-II.7840.3.1.2022) issued for Subtask 3 "*Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the town of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzow embankment*" in the field of the construction of floodgate with accompanying facilities in the axis of the inlet channel to the Sandomierz River Port – stage II, reinforcement of the channel bottom. The decision became final.

A total of 233 properties were subject to permanent occupation as part of the execution of Works Contract 3B.1, of which 135 properties belonged to natural persons (57.94%) and the remaining 98 properties to the State Treasury, Commune of Sandomierz, Commune of Samborzec and Commune of Koprzywnica. The area of permanent occupation is 93.6949 ha of which only 8.89% of the area, i.e. 8.3349 ha, belonged to natural persons and 1.6806 ha (1.8%) were public plots owned by Local Government Units. 89.31% of all properties were public plots owned by the State Treasury and Local Government Units (LGU). In addition to 233 expropriated plots, in the lines separating the investment area, there were additionally 119 plots located in the lines separating the investment area, which were plots of land owned by the Investor (excluded from permanent occupation).

In the case of Works Contract 3B.1 (3B.1/1), the issued decisions on the flood investment project implementation permit have encumbered 161 properties with permanent restrictions in the manner of use, of which 85 were private plots and 62 public plots. For 14 plots, there was no need to pay compensation as no damage was caused to them as a result of the flood protection investment. Culverts were being cleared and exits from the public road were being rebuilt and fences were being restored there. For the duration of exit reconstruction, the Contractor provided an alternate connection of the plot to the public road. However, there was no need to impose an obligation for reconstruction of infrastructure networks that would collide with the reconstructed section of the embankment. The following table shows what the Permanent Restriction consists of

Table 2. Effects of impacts of Permanent Restrictions

Subtask	Number of plots covered by PR	Manner of permanent restriction
Subtask 1 - Flood protection within the mouth section of the Atramentówka River, construction of a new "Kocmierzów" pumping station and of a gravity-type dam lock in Kocmierzów (on the right embankment of the Vistula River) and of a channel draining water from the Atramentówka River to the pumping station.	5	Permanent restrictions were established due to the necessity to build a ditch discharging into the Vistula River from the Koćmierzów pumping station, to build culverts along the discharge channel and to build public exits and the need to provide an MV power connection.
Subtask 2 - Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station.	81	Permanent restrictions were established due to the necessity to desludge the ditch and clear the bed of the Struga A watercourse.

Subtask 3 - Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the town of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzow embankment.	5	The permanent restriction consists in the prohibition to construct water facilities and to construct other building structures, to excavate wells, ponds, pits and ditches within a distance of less than 50 m from the foot of the embankment on the downstream side, and to cultivate land, plant trees or bushes on embankments and within a distance of less than 3 m from the embankment foot on the downstream side.
Subtask 4 - Protection of the embankments of Koprzywianka River - left embankment at km 0+000 ÷ 12+900, right embankment at km 0+000 ÷ 14+400.	31	The permanent restriction consists in the prohibition to cultivate land, plant trees or bushes on embankments and within a distance of less than 3 m from the embankment foot on the downstream side, and to construct building structures, to excavate wells, ponds, pits and ditches within a distance of less than 50 m from the foot of the embankment on the downstream side.
Subtask 5 - Construction of the water pumping station in Szewce.	34	Permanent restrictions were established due to the necessity to construct an exit from the poviast road, to provide a water supply connection to the control building with a hydrant, to construct a water supply pipeline, to construct a medium voltage power supply, to extend and rebuild the R2 drainage ditch supplying water to the reservoir and to construct an inlet chamber to the reservoir.
Subtask 6 - Expansion of the water pumping station in Zajeziarze.	5	Permanent restrictions were established due to the necessity to construct an exit and to incorporate an access road to the pumping station into the internal road, to execute works to extend the compensation reservoir on the watercourse from Zajeziarze, to secure the outflow channel from the pumping pipelines, and an embankment sluice to the Koprzywianka River, together with the slopes, counter-slope and the river bed.

The Investor made efforts to minimise the impacts during the execution of the works and, where it was not necessary, did not interfere with the PAPs' plots, limiting the impact of the project to the area covered by the boundary lines of the investment site and to the plots owned by the Investor (the State Treasury).

The Contractor, through its own efforts, acquired 88 properties with an area of 2.9175 ha for temporary occupation. This occupation was under a voluntary agreement between the Property Owner and the Works Contractor. The agreements were presented to the Contract Engineer and the Investor for review. Upon completion of the works, the Contractor restored the properties to their pre-investment condition or to the condition agreed by the parties in the statement granting consent for the temporary occupation and returned them to the Owners in the good and undeteriorated condition. The properties were taken over and returned by way of a certificate with remarks made in the certificate about the condition of the property on the day of return. The Contractor has also settled issues concerning the payment of remuneration for the use of the properties and compensation. A summary of the said properties is shown in Table 3.

Table 3. List of properties acquired by the Contractor subject to temporary occupation.

Plot number	Owner	Occupation area (ha)	Owner's consent (Y/N)	Period of temporary occupation		Return of the plot (Y/N)	Payment of remuneration and restoration to the previous state

Summary of information on the number of properties subject to permanent or temporary occupation is presented below in a summary table (Table 4).

Table 4. Summary of the number of properties subject to permanent, constant occupation.

	Total number of hectares [ha]	Total number of plots [pcs.]	Public plots (including Investor's plots) [pcs.]	%	Private plots	%	Physical resettlement	Economic resettlement	Compensation paid
Permanent occupation	93.6949	233	98	42,06	135	57,94	-	-	1,145,533.27 PLN
Permanent Restrictions	N/A	161	62	57.82	99	42.18	-	-	25,030.34 PLN
Temporary occupation (Contractor)	2.9175	90	0	0.0	90	100	-	-	N/A

Properties were acquired in accordance with the operational policy OP 4.12 and in accordance with the rules laid down in the LARPF and LARAP.

2.4. Development and adoption of the Land Acquisition and Resettlement Action Plan for implementation and Supplement no. 1 and Supplement no. 2

For the Task in question, the Investor developed the Draft LARAP, which was subject to public consultation from November 18, 2016 to December 09, 2016 (inclusive).

After finishing works on the draft LARAP and after obtaining on its basis the World Bank's acceptance for the commencement of the public disclosure procedure, the document was subject to public consultation conducted in accordance with the requirements of the World Bank's operational policy (OP 4.12), the purpose of which was to enable individuals, institutions and all interested parties to become familiar with the content of the document and to ensure the possibility to submit any comments, questions and conclusions to its content.

In accordance with Operational Policy OP 4.12, the public disclosure of the Land Acquisition and Resettlement Action Plan commenced on November 10, 2016, when an announcement was published in local press (Gazeta Wyborcza – supplement for Kielce), the announcement was posted on notice boards of the Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, a field branch of the Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, Branch in Sandomierz, City Office of Sandomierz, Town and Commune Office of Koprzywnica and the Commune Office of Samborzec, as well as on the websites of the Świętokrzyskie Board for Amelioration and Hydraulic

Structures in Kielce, Odra-Vistula Flood Management Project Coordination Unit, City Office of Sandomierz, Town and Commune Office of Koprzywnica and the Commune Office of Samborzec.

Any interested party could, in the period from November 18, 2016, get familiarised with the Draft LARAP (in paper version) at the seats of:

- Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, 86. Witosa St., 25-561 Kielce on working days from 8:30 am to 2:30 pm,
- Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, Branch in Sandomierz, 14. Staromiejska St., 27-600 Sandomierz on working days from 8:30 am to 2:30 pm,

or with the electronic version of the document published on the website:

- SZMIUW at - www.szmiuw.kielce.com.pl,
- City Office in Sandomierz at – www.sandomierz.pl,
- Odra-Vistula Flood Management Project Coordination Unit at the following address – www.odrapcu.pl.

Each interested party could submit comments and motions concerning the draft LARAP in writing and orally to the protocol at the above-mentioned addresses or in electronic form to the e-mail address: jrp@szmiuw.kielce.com.pl from November 18, 2016 to December 09, 2016 (inclusive). The institution competent to examine the comments and motions was the Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce. The contact person was Mr Krzysztof Omelański.

An announcement of public consultation was also posted on notice boards and published at websites of the above-mentioned institutions, i.e.:

- City Office in Sandomierz at - www.sandomierz.pl,
- Town and Commune Office of Koprzywnica at - www.koprzywnica.bip.gmina.pl,
- Commune of Samborzec at - www.samborzec.pl,
- Odra-Vistula Flood Management Project Coordination Unit at the following address – www.odrapcu.pl;

as well as on the notice boards of the City Office of Sandomierz, Town and Commune Office of Koprzywnica and the Commune Office of Samborzec as well as at the sites of construction works.

In addition, the information was sent to public institutions interested in the implementation of the Project:

- Marshall Office of Świętokrzyskie Province,
- Regional Water Management Authority in Cracow,
- Świętokrzyskie Provincial Office,
- City Office of Sandomierz,
- Powiat Starosty in Sandomierz,
- Commune Office of Koprzywnica,
- Commune Office of Samborzec,
- Sandomierz Lovers' Club.

After the period of making the document available for viewing, a meeting open to all interested parties was held on December 12, 2016 at 4.00 pm, at the office of Powiat Starosty in Sandomierz, at which information on the Draft LARAP was presented and a public discussion on the document took place. The motions and comments made to the document prior to or during the meeting were considered insignificant and caused no changes to the LARAP. The World Bank's "No objection" was awarded for the document on December 29, 2016.

The final LARAP document, after obtaining the “no objection” clause from WB, was made available to interested parties i.e. posted at the PIO's and Odra-Vistula Flood Management Project Coordination Unit's websites and remained there until the completion of Contract implementation. The provisions of the LARAP were implemented both before and throughout the execution period of installation and construction works.

It was necessary to prepare 2 supplements to the LARAP, related to the contract being implemented, when conducting construction works.

Supplement no. 1 was drawn up on November 17, 2020 and concerned the acquisition of additional properties for the Sandomierz port gate. The plots necessary for investment implementation are shown in the table below.

*Table 5. List of additional properties which are necessary for investment implementation**

No.	Plot no.	Area	Owner / Manager
1.	1304/11	0.1254ha	State Treasury / RZGW in Cracow (permanent management)
2.	1301	0.2140ha	State Treasury / RZGW in Cracow (permanent management)
3.	2334	0.0842ha	State Treasury / RZGW in Cracow (permanent management)
4.	1403/12	0.2974ha	State Treasury / in perpetual usufruct by a natural person
5.	1304/12	0.2391ha	State Treasury / RZGW in Cracow (permanent management)
6.	1403/11	0.4130ha	State Treasury / Marshal of the Świętokrzyskie Province (permanent management)
7.	1407/1	0.1132ha	State Treasury / Marshal of the Świętokrzyskie Province (permanent management)

* The table presented contains a list of properties and the ownership structure included in the analyses for the entire contract.

The Investor had to acquire only part of one plot from private individuals. The remaining six plots were in the State Treasury's possession.

A meeting was held on May 26, 2020 with the holder of the part of the plot planned to be taken over, who expressed their willingness to be compensated in cash.

The document was granted the “No objection” clause from the WB on December 16, 2020.

The final document, after obtaining the “no objection” clause from WB, was made available to interested parties, i.e. was posted at the websites of the State Water Holding Polish Waters, Regional Water Management Authority in Cracow and the Odra-Vistula Flood Management Project Coordination Unit and remained there until the completion of Contract implementation. Its provisions were being implemented both before and throughout the execution period of installation and construction works.

Supplement no. 2 was prepared in August 2022 and determined the rules for the payment of compensation to the owner of the plot on which a building structure is located - a garage used for business purposes, to which access will be restricted as it is necessary to perform construction works consisting in the construction of a retaining wall in the edge of a roadway and the reprofiling of the asphalt of Zarzewice Street and in the construction of a walkway between the asphalt roadway and the retaining wall.

The document was granted the “No objection” clause from the WB on November 15, 2022.

The final document, after obtaining the “no objection” clause from WB, was made available to interested parties, i.e. was posted at the websites of the State Water Holding Polish Waters, Regional Water Management Authority in Cracow and the Odra-Vistula Flood Management Project Coordination Unit and remained there until the completion of Contract implementation. Its provisions were being implemented both before and throughout the execution period of installation and construction works.

2.5. Summary of activities related to payment of compensation

The land acquisition process, with a particular focus on the payment of compensation, was monitored from the moment the IPIP decision was issued until the end of compensation payment for permanent occupation and until the full final implementation of LARAP was finished. Currently, actions are still being taken to pay compensation for the establishment of Permanent Restrictions for the plots with unsettled legal status, for which due to the lack of a land and mortgage register, a collection of documents or other documents, it is not possible to determine the persons who have property rights to it, and for whom it has not been possible to determine the owner/compensation, or due to the unfinished inheritance, it is impossible to determine who the owner is.. Applications to determine the amount of such compensation were submitted to the Province Governor of Świętokrzyskie as the competent authority for their determination. As of the date of preparing this Report, the Province Governor of Świętokrzyskie prepared appraisal reports determining the value of compensation for the establishment of Permanent Restrictions and has sent out notices on the possibility to become acquainted with the evidence collected in the files of the case.

The Investor has entered into agreements with the owners of plots with a regulated legal status who could be established and has paid them appropriate compensation for Permanent Restrictions.

In addition, the Investor monitored the properties subject to temporary occupation, placing a particular focus on returning the properties in an undeteriorated condition.

Table 6. Summary of monitoring indicators used in the execution of Contract 3B.1 (3B.1/1) implemented by SWH PW RZGW in Cracow (as per the monitoring table from LARAP).

Indicator	Information source	Frequency of monitoring	Progress indicator
Assumed parameters			
Number of properties subject to permanent occupation	IPIP decision	Once after the decision is issued	233
Number of properties subject to permanent restrictions	IPIP decision	After issuing the decision, after completion of construction works	161

Number of project affected persons (PAP): - owners, - perpetual users, - autonomous possessors, - others (if any).	Land and mortgage registers, decisions determining the amount of compensation	Update after completion of compensation payments	219 private owners 11 public owners (state treasury entities and ULA)
Achieved parameters			
Number of acquired properties	Investor's/Consultant's registers	Once after the decision is issued	233
Number of compensation paid	Investor's registers	Once after the decision is issued	160
Effectiveness indicators			
Number of complaints and applications	Investor's/Consultant's registers	Monthly/Quarterly	4

Table 7. Additional monitoring indicators used during the implementation process of the LARAP.

Indicator	Information source	Frequency of monitoring	Indicator
Number of people at risk of flood before implementation of the Contract	Data from model tests	Once at the investment preparation stage	approx. 11,958 people
Number of people protected against flood	Investor's/Consultant's registers	One time after Contract execution	approx. 11,958 people
Number of hectares of land at risk of flooding before Contract implementation	Data from model tests	Once at the investment preparation stage	approx. 1,120 ha
Number of hectares protected from flood	Investor's/Consultant's registers	One time after Contract execution	approx. 1,120 ha
Number of properties (plots) subject to temporary occupation by the Contractor and returned to owners in good condition	Investor's/Consultant's registers	Entire time of implementation	88 (90 plots)

Summary of socio-economic studies and status of PAPs after payment of compensation

A survey was conducted between June 07, 2016 and October 31, 2016 among PAPs on their perceptions of the rationale for the implementation of Works Contract 3B.1 (3B.1/1), sources of revenue, the impact of the investment on their quality of life and their economic situation (impact on revenue levels). The target group for the surveys were individuals whose properties were subject to expropriation and whose area subject to permanent occupation exceeded 10% of the initial area of the plot subject to occupation.

In the course of the survey, there were recurring issues, which were also important from the point of view of the investment process, which are discussed below.

The area covered by the investment is inhabited by families, which mostly run agricultural activity as one of additional, less significant sources of income. For 83 interviews conducted, only 18 farms were identified as being the source for sustenance. In all cases, the properties taken over for the benefit of the State Treasury do not cause any effects that will have a negative impact on the economic situation of households. Respondents indicated during the interviews that they own several plots and, for these reasons, the expropriation of a piece of land will not have a negative impact on their income level. In each case, these people also declared their interest in paying compensation in cash, and not as an equivalent offsetting of the impact in the form of "land for land".

In the other cases, farming is legacy in the family after past generations, which in this way had earned a living and left the children the land by passing it with notarial acts. This group is already inactive professionally, staying on a pension or retirement. Currently, the generation, which is of working age in a large part, is employed outside the farm. The main, largest employer in the area is the Sandomierz Glassworks.

The above analyses confirmed the PAPs' expectation that compensation payments should be made in money.

The relatively low socio-economic costs of the Contract are also a consequence of the fact that there are no public institutions such as schools, offices, work establishments or churches or seats of other religious associations on the area of the embankment designated for extension, which means that the expropriation procedure only in a small way affected the people who are owners of the affected properties.

Payment of compensation

After the IPIP decision had been issued and became final and binding, the Investor started to send compensation payment offers to the PAPs concerning the disbursement of compensations for expropriated properties in the amounts resulting from appraisal reports prepared by an independent appraiser. Compensation was paid for the permanent occupation of 224 plots out of 233 plots, and in the case of 9 plots, due to their unsettled legal status and unresolved ownership issues (the need for inheritance proceedings), the compensation was directed to a court deposit.

For 11 properties, after an unsuccessful attempt to agree on the amount of compensation (due to the lack of consent to the amount of compensation proposed by the Investor or the unsettled legal status of the property), the cases were referred to the Province Governor of Świętokrzyskie for settlement. All proceedings with the Province Governor have now been completed. Compensation was paid on the basis of an administrative decision or, in 9 cases involving properties with an unsettled legal status, directed to a court deposit.

In summary, all compensations for 233 properties expropriated under the Project have been paid to PAPs either directly, or paid to a court deposit prior to the commencement of Construction works.

In the case of other properties, it was not necessary to disburse compensation, as these properties had already been owned by the Investor or the State Treasury before the start of Works Contract 3B.1. The State Treasury's properties were not subject to acquisition, but were transferred free of charge to the Investor's management.

In 46 cases (51 plots) concerning real estate with permanent restrictions, the Investor paid compensation based on the appraisal reports prepared and the minutes agreed on the amount of compensation signed by the parties. In 32 cases (34 plots), the cases were referred to the Świętokrzyskie Voivode to determine the amount of compensation. In 22 cases, during the proceedings, it was possible to identify the persons entitled to compensation, in 8 cases the Voivode

ruled on the need to direct the compensation in full to the court deposit, and in 2 cases the co-owners of the plot were identified and the remaining part of the compensation was ordered by the Voivode to be transferred to the deposit. Compensation payment based on pending decisions.

Details for payment of compensation are presented in Appendix no. 2 of the Final Report, while details of compensation paid into court deposit are given in Appendix no. 3.

Table 8. Summary of LARAP implementation costs.

Item	Quantity	Amount
Compensation for permanent occupation, including plantings and infrastructure elements	233 plots	PLN 1,145,533.27
Purchase of remnants	0 properties	PLN 0.00
Compensation for establishment of Permanent Restrictions	48 plots	PLN 25,030.34
Costs of drawing up appraisal reports for Permanent Restrictions	129	PLN 0.00
Costs of drawing up appraisal reports for permanent occupation	No data	No data
Court costs (fees for applications submitted, notices in the press and curator's fees)	N/A	-----
Other implementation costs of LARAP (postage)	N/A	-----
TOTAL		PLN 1,239,952.61

Compensation was paid by the Investor, i.e. Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce/SWH PW RZGW in Cracow by bank transfer to the PAP's indicated bank account, in a few cases by postal order or to an escrow account (in the absence of legitimate heirs to the property).

People affected by the Project, as part of the information campaign carried out in accordance with the provisions of the LARAP, were informed about the possibility of applying for the purchase of the remaining part of the property (i.e. so-called "remnants"), if after the division of the property and occupying part of it for the investment, the remaining part will not be suitable for further use for the existing purposes.

No person has applied for the purchase of "remnants" as at the date of preparing this Report.

The total amount of compensation for expropriated properties is PLN 1,145,533.27.

As per the WB's Operational Policy OP 4.12, in all cases where payments could be made to existing owners/co-owners, compensations were made prior to the commencement of construction works, i.e. before October 30, 2017. In the absence of a person entitled to be paid the compensation, the amounts due were deposited with the court deposit. These funds are available and will be paid immediately to eligible persons, after the conditions to release the funds from the deposit are met.

Results of survey studies after the completion of Contract 3B.1 (3B.1/1)

Survey studies were conducted after the completion of Contract 3B.1 (3B.1/1) among PAPs and representatives of local authorities - local government units (i.e. mayors of villages covered by the contract).

As the impacts of the said Contract are insignificant, anonymous survey studies were conducted with a representative sample of project affected persons – representatives of 35 households (i.e. ca. 15%). The studies were conducted through face-to-face and anonymous questionnaire interviews, which ensured that the PAPs' views were obtained more effectively than surveys conducted by correspondence. The direct contact between the researcher and the respondent also allowed, in many cases, to assist the PAPs to complete the questionnaire by providing explanations on the wording used or on such a seemingly trivial issue as reading the questions and noting down the answers - especially with regard to elderly citizens.

The set of completed questionnaires obtained was archived by the Consultant. This can be made available for review by those interested, as the questionnaires were completed anonymously.

All respondents indicated that the implemented investment had a positive impact on the community in which the surveyed PAP resides. As for the investment's direct impact on the PAPs and their relatives, the respondents answered that this impact is definitely positive or positive. None of the surveyed PAPs gave no response in which they stated that the investment had affected him or her and his or her loved ones negatively.

The impacts caused by the implementation of the flood protection project did not result in significant changes in the socio-economic situation of the household, remaining at pre-project levels, nor did they affect the livelihoods of PAP households.

All respondents confirmed that they had received compensation for the expropriated properties in a timely manner and in accordance with the rules indicated in the Land Acquisition and Resettlement Action Plan. In their opinion, the property acquisition activities were in line with the applicable regulations.

The PAPs surveyed positively judged the information activities undertaken by the Investor – they indicated that they were satisfied with the way in which they were informed about the investment and the planned activities.

The PAPs indicated that this kind of investment is much needed and they support its implementation. The results of the survey conducted lead to the conclusion that the PAPs are very glad and satisfied with the way the Project has been implemented. The expropriations carried out have not caused any significant changes in the economic situation of PAP households. The executed investment was needed and had a positive impact on the PAPs.

2.6. Scope of executed works.

6 subtasks were implemented as part of the investment and consisted of constructing a flood protection embankment for the Vistula River connecting the existing Vistula embankment with the flood protection gate of the river port in Sandomierz, constructing 4 pumping stations, modernising over 27 km of embankments on the Koprzywianka River and modernising the surrounding embankment together with a wall protecting a housing estate and glassworks in Sandomierz from flooding.

Subtask 1

Construction works were performed consisting of building a pumping station in Koćmierzów, together with a storage reservoir and a 1.2 km long inflow channel connecting the Atramentówka watercourse with the storage reservoir of the Koćmierzów pumping station.

Subtask 2

Construction works were performed consisting of modernising a building of the Nadbrzezie pumping station pumping water from the Struga A watercourse to the Trześniówka river.

Subtask 3

A flood protection gate for the Sandomierz river port, a surrounding embankment with a reinforced concrete retaining wall and mobile crossings to protect a housing estate and a glassworks in Sandomierz were constructed.

Subtask 4

Construction works were performed consisting of modernising the embankments of the Koprzywianka River by sealing them with bentonite mat and raising the ordinate of their height. The subbase of the embankment was sealed with an anti-filtration membrane in the form of a DCMM membrane and 7 km of membrane was constructed in the form of Larsen cofferdams. 14 embankment sluices were constructed. In addition, embankment roads and roads by embankments were constructed.

Subtask 5

Construction works were performed consisting of building a new pumping station in Szewce with a storage reservoir and inflow channels r1 and r2

Subtask 6

Construction works were performed consisting of modernising the pumping station in Zajeziorko and enlarging the storage reservoir.

All pumping stations were equipped with additional alternative power sources in the event of a primary (mains) power failure, i.e. stand-alone and independent power generators.

The Contractor provided archaeological supervision of the entire construction site during the works; however, no archaeological sites were identified. No other traces of historic items were encountered during the works.

The local community, mindful of the effects of the 2010 flood, was very positive about the project during the execution of the works, as the completion of the flood protection project has improved the safety of their lives and assets from the effects of floods likely to occur in the future.

The requests filed with the Engineer or the Employer were considered and responded to in accordance with the procedure adopted in the LARAP (a detailed description of the requests submitted and considered is indicated below and in point 5).

Photo 6. Subtask 1 - Implemented construction of the pumping station in the town of Koćmierzów – general view (source: SWH PW's own materials).

Photo 7. Subtask 2 - Implemented construction of the Nadbrzezie pumping station – general view (source: SWH PW's own materials).

Photo 8. Subtask 3 - Implemented construction of the Sandomierz surrounding embankment – general view (source: SWH PW's own materials).

Photo 9. Subtask 3 - Implemented construction of the flood gate in Sandomierz – general view (source: SWH PW's own materials).

Photo 10. Subtask 4 - Modernised embankments of the Koprzywianka River – bird's eye view (source: SWH PW's own materials).

Photo 11. Subtask 5 - Implemented construction of the pumping station in the town of Szewce – general view (source: SWH PW's own materials).

Photo 12. Subtask 6 - Implemented construction of the pumping station building in the town of Zajeziorsze – general view (source: SWH PW's own materials).

During the execution of the works, the Contractor used public and internal roads on the basis of agreements signed with their Managers. After the end of the works, these roads were restored to the condition indicated in the agreements signed with the Managers. Any damage has been repaired.

Table 9. Summary of sections of public roads and sections of internal roads renovated by the Contractor upon completion of construction and installation works.

Identification	Kilometre or town	Length of repaired section [m]
Commune road no. (plot no. 1530/11 and 1530/9) Zarzekowice	Sandomierz	650 m
Commune road no. (plot no. 1612) Portowa	Sandomierz	240 m
Commune road no. (plot no. 1402/7) Mostowa	Sandomierz	530 m

The cost of modernising the road sections, detailed above – amounted to PLN 2,155,379 gross. As PAPs' requests for additional traffic facilities - mobile crossings - were investigated positively (this issue is described in Chapter 5), 6 additional mobile crossings were provided through the retaining wall constructed on the section of the surrounding embankment. It should be stressed that these measures are part of the Bank's operational policies and represent additional minimisation/compensation measures for the PAPs, implemented during the execution of the Contract.

2.7. The number of people who have benefited from Contract implementation.

Approx. 11,958 people living in an area of approx. 1,120 ha have been protected from flooding due to the implementation of Contract 3B.1 (3B.1/1) *Flood protection of Sandomierz*. Flood protection has been provided for residential and commercial buildings, religious buildings, commercial and service buildings, manufacturing buildings, health care, educational and cultural and sports buildings and cemeteries. Project implementation has also contributed to the protection against flooding for the entire technical and communal infrastructure located within that area, i.e. power lines, telephone lines, gas network, water supply network, sewage system.

The execution of works proceeded without conflict. This situation was the outcome of the correct implementation of the measures indicated in the "The Land Acquisition and Resettlement Action Plan for Works Contract 3B.1 *Flood protection of Sandomierz*" (inter alia impact minimisation measures, information measures, organisational measures), the implementation of additional minimisation measures for PAPs and the implementation by the Works Contractor of the recommendations of the "Environmental Management Plan for Works Contract 3B.1", i.e. mitigation measures – minimising negative impacts, including in relation to valuable natural resources or historical sites. Indeed, during the execution of works, additional requests made by local residents were taken into account with regard to facilitating access to agricultural land located around the embankments being reconstructed (this issue is described in more detail in point 2.6 and point 5).

It should be highlighted that among the PAPs directly affected by the implementation of Works Contract 3B.1 (3B.1/1), 100% of people are the beneficiaries of this Project, as each of them has - if not primary residence, then at least an agricultural property - in the area protected from flood thanks to the embankments reconstructed within the framework of the Contract, and the whole area is now protected from flooding.

In summary, the implementation of Contract 3B.1 (3B.1/1) has had a direct impact on enhancing the sense of security of the local community, and on securing the habitats, properties/assets from flood.

3. PRINCIPLES OF LARAP IMPLEMENTATION DURING CONTRACT EXECUTION.

The rules arising from Polish legislation, World Bank's policy OP 4.12 and the LARAP were complied with during the execution of works. This applied to the acquisition of properties necessary to implement the Contract and to the manner of executing the works, which minimised adverse impacts on project affected persons. The guiding principle of the activities was to achieve the effect of improving or at least restoring PAPs' living conditions, and assuring long-time balanced use of environmental resources within that area.

The rules applied in the process of land acquisition and resettlement are in conformity with assumptions stated in the general OVFMP program document, so-called Land Acquisition and Resettlement Policy Framework (LARPF), available at: <https://odrapcu.pl/dokumenty/ramowy-dokument-dotyczacy-przesiedlen-i-pozyskiwania-nieruchomosci/>. The actions taken are described in detail in the following chapter of this Report.

3.1. Minimising the areas subject to occupation.

One of the key principles that was applied during design works was the principle of minimising the area of permanent and temporary occupation and the area of permanent restrictions. Such solutions were

employed both in the case of natural and legal persons and public entities (i.e. the State Treasury and Local Government Units), e.g.

- in order to reduce permanent and temporary occupation on the downstream side and to avoid collisions with residential development, reconstruction of the embankment was designed by extending the embankment body on the embanked area side;
- the sealing of the embankment was designed and executed with an anti-filtration membrane in the form of a bentonite mat. The anti-filtration membrane in the soil below the base of the embankment was constructed using the DCMM technology, i.e. continuous deep mixing method, and a Larsen steel wall was constructed along 7 km of the embankment, in the base of the embankment's upstream slope, which reduced impacts on the areas of the area beyond the embankment when conducting the works.

It should also be pointed out that the limitation of the area of occupation and thus of the impacts on the PAPs was influenced by the actual situation, i.e. the extension concerned an embankment that had already been in place for years (a linear investment involving the extension of the embankment and accompanying infrastructure), which involved the occupation of small areas of properties. Additionally, the implementation of this Contract has made it possible to settle the factual status of part of the properties. The factual status of plots was settled as part of Permanent Restrictions in the use of properties, in such a way that Permanent Restrictions were established on the part of the plots actually occupied by the watercourse. On this part of the plots, the owners are not allowed to farm, so compensation was paid to the owners of agricultural properties for the parts of the property occupied by water facilities (Struga A watercourse) in situations where, due to the construction of the watercourse, the properties generated no income and, in fact, burdened the household budget with the annual tax on these properties. These issues were settled under Contract 3B.1 (3B.1/1) and the PAPs were compensated accordingly, which significantly raised the local community's positive perception of the Contract.

3.2. Minimising impacts at the stage of construction works.

Prior to the commencement of works, the then Investor, i.e. Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, conducted a broad information campaign about the planned execution of the Contract and about launching an information point for project affected persons, where they could submit their applications and comments to the performed construction works and planned activities. An information brochure with information on the possibility to submit grievances (in accordance with the LARAP provisions) together with contact details was prepared and disseminated among PAPs.

Due to Contract execution, it was necessary to temporarily acquire properties for the purpose of its implementation (occupied for construction backyard and for storage of soil masses and other construction materials). The Contractor has minimised the scope of temporary occupation and the location has been chosen to be convenient for the local community (inconvenience associated with transporting materials and hauling equipment was minimised). When negotiating the conditions of temporary property occupation, the Contractor was guided by the rules laid down in the LARAP (the process took place on a voluntary basis). In addition to cash payments, the Contractor was also entitled to offer other forms of assistance for PAPs. Compensation for the occupation of properties was paid by the Contractor to the owners prior to their temporary occupation. After the execution of works, the

temporarily occupied properties were rehabilitated and returned to their owners in an undeteriorated condition. This whole process was monitored by the Engineer and the Investor.

3.3. Minimising the impact by informing the parties about their rights.

As part of the information campaign described in point 3.2 above, PAPs were also informed about the possibility of applying for the purchase of the remaining part of properties (so-called "remnants"), if - after the division of the property and taking part of it for the investment - the remaining part will not be suitable for further use for the existing purposes (in line with Article 23(2) of the Special Flood Act). The full wording of this provision reads:

(...) Art. 23.

2. In the case of properties referred to in Article 9(5)(a), if part of the property is taken over and the remaining part is not suitable for proper use for existing purposes, the investor is obliged to acquire, at the request of the owner or perpetual usufructuary of the property, on behalf and for the benefit of the State Treasury or a local government unit, that part of the property. (...)

No applications for purchase of remnants were received as at the date of elaborating the Final Report on the implementation of the LARAP.

If an application is submitted, it will be subject to examination by a committee specially set up at the PIU. The PAP who submits an application will be kept informed of the next steps and actions that are being taken in their case.

3.4. Minimising the impacts through organisational measures.

Minimising the impact during Contract implementation was also achieved through organisational measures pursued on the stage of performing construction and assembly works. The measures implemented:

- a) Property release took place after harvesting of crops.
- b) Expropriated persons were entitled to use of the land in the existing manner until receiving compensation.
- c) Project Affected Persons were notified by the Investor about physical commencement of the works in advance that allowed them for finishing management within the property.
- d) Any costs associated with implementation of measures mitigating and compensating adverse impact are included in the OVFM Project costs.
- e) During the performance of construction works, required distances from overhead power lines were maintained.
- f) Near the existing underground infrastructure development, all the works were carried out manually in order to avoid any damage.
- g) Works were performed during daytime hours only, respecting night-time rights.
- h) An anti-filtration membrane was constructed using the continuous deep mixing method, i.e. the vibration-free method.
- i) For the time of conducting works, the owners' supervision of infrastructure networks was ensured.
- j) Owners of properties which were temporarily occupied for the purpose of Task implementation received compensation from the Contractor for temporary occupation of the properties (the Contractor was responsible for proper actions in that respect and – with its own efforts – has acquired land for temporary occupation through negotiations on the possibility of temporary

occupation at the owner's voluntary consent). After completion of the works, the properties were reinstated to their previous condition and returned in a good shape. All activities of the Contractor described above in the scope of temporary occupation of real estate were constantly monitored and supervised by the team of the Engineer and the Investor.

- k) The Contractor took care of the condition of the access roads he used. The Contractor safeguarded the construction site and the operating backyard facilities with storage yards from excessive dust.

3.5. Minimising the impacts through formal and legal measures.

Owners/co-owners received compensation for the properties taken over by law, amount of which was determined on the basis of appraisal reports prepared by an independent appraiser (as per OP 4.12). Any person dissatisfied with the amount of compensation proposed to them by the Investor was entitled to be granted access to a free and easy-to-use appeal mechanism. After the lapse of 2 months from the date when the IPIP decision became final and the compensation amount was not agreed between the former property owner and the Investor, the amount of the compensation was determined by the Province Governor of Świętokrzyskie by way of a decision. The PAP had a right of free-of-charge appeal to the authority of higher level i.e. to the relevant Minister. The appeal procedure was used by 4 PAPs.

4. PUBLIC CONSULTATION

The process of informing the community about the Project was conducted for the entire period of preparation for and implementation of the Contract, from the moment of applying for the decision on environmental conditions.

The local community was informed about the planned Contract at the stage of the conducted administrative procedures related to issuing:

- decision on environmental conditions;
- water permit decision;
- investment project implementation permit decision;

by way of announcements posted on notice boards and websites of the authorities conducting the proceedings (Regional Directorate for Environmental Protection in Kielce, Marshal of Świętokrzyskie Province and Province Governor of Świętokrzyskie) and in the manner customarily accepted, i.e. on publicly available notice boards in places where the Contract was implemented.

The local community was informed about the fact that the PIU submitted applicable applications, and that the relevant decisions indicated above were issued. This provided an opportunity for the parties to comment on any issues relating to the planned Contract.

After the decision was issued, the parties were also advised by the issuing authorities of their options for filing an appeal against the decisions. No appeals have been lodged.

Furthermore, the PAPs owning properties in the Contract implementation area were notified by letter (registered letter with receipt confirmation) that a procedure is conducted related to the acquisition of the properties for the benefit of the State Treasury and about the planned start date of works.

Additional information about the investment being implemented and on the Land Acquisition and Resettlement Plan being developed was presented at a meeting organised by the Świętokrzyskie Board for Amelioration and Hydraulic Structures held on December 12, 2016 at the Powiat Starosty in

Sandomierz. The legal basis and procedure for the acquisition of properties, the rules for determining and paying compensation for the acquisition of rights to properties by the State Treasury in accordance with applicable law and the World Bank's policy were presented. The gathered persons were also informed about the appeal procedure provided for by law, from the decisions determining the amount of compensation as well as about the procedure for submitting complaints and applications. In particular, the attention was paid to the need to regulate the legal status of properties and to update address data in all registers. Participants of the meeting had the opportunity to familiarise themselves with the maps on which the plots were marked, which would be taken over to the benefit of the State Treasury for the purpose of Task execution. Some of the participants got acquainted with the said map.

During the meeting, the participants were provided with a brochure containing information on the purpose of the Task, the scope of the works envisaged and the area necessary to perform the Task. The brochure also contained a description of the procedure for acquisition of properties by the State Treasury and the rules for determining and paying compensation for the acquisition of rights to properties in accordance with the applicable laws and the World Bank's policy. The brochure also comprised information about the rules for determining and paying compensation, the rules and place for submitting complaints and applications. The brochure was additionally distributed to residents in the areas affected by the Project's impacts.

The aim of public consultation was to enable the natural persons, institutions and all interested parties to become familiar with the document and to ensure a possibility of submitting comments, questions and motions to its contents. In accordance with the World Bank's Operational Policy OP 4.12, the public disclosure of the Draft LARAP document commenced on November 18, 2016, when an announcement was published in local press (i.e. a supplement to a regional daily newspaper). An announcement of public consultation was also posted on notice boards of ŚZMiUW in Kielce and in the branch in Sandomierz, City Office of Sandomierz, Town Office of Koprzywnica, Commune Office of Samborzec as well as at the sites of performing the construction works.

The announcement invited individuals, authorities and interested institutions to view the Draft LARAP document for the Works Contract 3B.1. Information was also included in the published announcement about a scheduled meeting open to all interested parties to be held as part of the conducted public consultation on the draft LARAP (including date, time, venue and purpose of the meeting).

The draft LARAP (electronic version in Polish and English) was made public from November 18, 2016 to December 09, 2016 on the websites of:

- Świętokrzyskie Board for Amelioration and Hydraulic Structures - www.szmiuw.kielce.gov.pl
- City Office in Sandomierz - www.sandomierz.pl
- Commune Office of Samborzec - www.samborzec.pl
- Commune Office of Koprzywnica - www.koprzywnica.bip.gmina.pl
- Odra-Vistula Flood Management Project Coordination Unit - www.odrapcu.pl

The printed document was made available for viewing by all interested parties during the period from November 18, 2016 to December 09, 2016 at the seats of: Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce.

In addition, the information (personal invitations) was sent to public institutions interested in the implementation of the Project:

- Świętokrzyskie Provincial Office
- Marshal's Office in Kielce
- Powiat Starosty in Sandomierz,

- City Office of Sandomierz,
- Commune Office of Samborzec,
- Commune Office of Koprzywnica.

No questions or applications were received by the Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce within the period for submission of questions to the publicised Draft Land Acquisition and Resettlement Action Plan. No questions were submitted to the Office/Offices of SWH PW RZGW in Rzeszów via e-mail or in person.

A meeting - open for the public - on public consultation regarding the Land Acquisition and Resettlement Action Plan for the Works Contract 3B.1 Flood protection of Sandomierz took place after the end of 16 working days (21 calendar days) of making the Draft LARAP public on December 12, 2016 at 4:00 pm in the seat of the Powiat Starosty in Sandomierz.

Twenty-three persons interested in Project implementation were present at the meeting. Among the participants were representatives of the local government as well as the representatives of units directly involved in OVFMP implementation: Project Implementation Unit from SZMIUW and Water Supervision in Tarnobrzeg, Project Coordination Unit.

Each participant could submit oral and written comments/remarks on the draft LARAP to the protocol/report at the meeting (open to anyone interested in Project implementation) during the public discussion. No additional questions or comments, which would require time for answer, were received during the meeting. Answers to the questions asked during the meeting were continuously provided. The issues described in detail in the LARAP document were discussed and clarified during the meeting.

A report was drawn up from the meeting, sent to the World Bank. The final LARAP document, after obtaining the "no objection" clause from the WB, was made available to interested parties i.e. by publishing on PIU and OVFM PCU websites and remains there until the completion of the Contract.

An information point on the Project was in operation throughout the Contract period (details are provided in point 5). None of the issues raised was left unaddressed by the Investor and the Consultant.

5. GRIEVANCE REDRESS MECHANISM.

The grievance redress mechanism pertaining to any matters connected with the implementation of Contract 3B.1 (3B.1/1) was put in place at the beginning of the whole process and was binding throughout the entire period of implementation, functioning and closure of the Contract.

Any interested party was entitled to lodge a complaint or application at one of three locations:

- a) Directly in the Project's main office, which operated as a consultation point, i.e.: AECOM Polska Sp. z o. o. 86a. Chwałki St., in Sandomierz
- b) Directly in the seat of the Investor i.e.:
 - Świętokrzyskie Board for Amelioration and Hydraulic Structures in Kielce, 86. Witosa St., 25-561 Kielce (until December 31, 2018),
 - SWH PW Regional Water Management Authority in Cracow, 22. Marszałka Józefa Piłsudskiego St., 31-109 Cracow (as of January 01, 2018)
 - Project Implementation Office, branch in Kielce,
 - Drainage Basin Administrations in Sandomierz, 4A. Długosza St., 27-600 Sandomierz
- c) Additionally, complaints and applications could be submitted: by electronic means to the e-mail address: krakow@wody.gov.pl

During the execution of Contract 3B.1 (3B.1/1), a total of 4 complaints from residents (including 1 petition from residents of Zarzekowice Street for changing the traffic organisation) were received regarding the executed Contract; the complaints and applications were investigated in detail and exhaustive responses were addressed to PAPs in congruence with the established grievance redress mechanism.

The issues with which PAPs approached the Investor or the Contract Engineer are described below.

List of complaints and applications

No complaint that had a significant impact on the running of the household and the living conditions of the PAP was received during the execution of the Contract. A total of 4 complaints were received, as a result of which the Investor took mitigation measures in the form of additional vegetation planting, while as a result of one complaint, the Investor made changes to the construction design in such a way that the investment had the least possible impact on the PAPs. A collective petition from the residents of Zarzekowice Street (Sandomierz) concerning the safety and organisation of traffic in the above-mentioned street was received. The petition was investigated and residents were given comprehensive information that all matters should be addressed in accordance with the relevant jurisdiction to the road manager, who is the competent authority to deal with the matter. It is beyond the Investor's powers to change the safety and traffic organisation rules.

Summary of complaints and applications:

- 1) Complaint from a private person – request from a resident of Bosmańska Street in Sandomierz. The complaint was received on August 12, 2021 and concerned the issue of construction works conducted on the applicant's property. The complaint was partially considered. A response was provided on December 21, 2021. Mitigation measures were taken and appropriate changes were made to the design documentation, and additional planting of vegetation was carried out. The payment of monetary compensation for construction works in the vicinity of his plot was rejected, in the absence of damage. The complaint was not continued.
- 2) Complaint from a private person – request from a resident of Zarzekowice Street in Sandomierz. A complaint of April 13, 2022, concerning nuisances related to the works performed by the Contractor and the impact of the implemented project on the surroundings. A response was given in June 2022 to the complaint proposing mitigation measures in the form of additional vegetation planting. Additional planting of vegetation was carried out. The complaint was not pursued.
- 3) Complaint from a private person – request from a resident of Zarzekowice Street in Sandomierz. A complaint of April 22, 2022, concerning nuisances related to the works performed by the Contractor and the impact of the implemented project on the surroundings. A response was given in June 2022 to the complaint proposing mitigation measures in the form of additional vegetation planting. Additional planting of vegetation was carried out. The complaint was not pursued.
- 4) A complaint (petition) by residents of Zarzekowice Street in Sandomierz concerning the construction of additional stairs and mobile crossings in the retaining wall and changes in traffic organisation.

Changes were made to the design documentation as a result of examining the complaint (petition), and additional 6 mobile crossings were made in the retaining wall. Residents were informed in the response given to the complaint that the road manager should be contacted to make changes to the traffic organisation.

The complaints of the residents of Zarzekowice Street were found to be unfounded, the residents wanted to receive monetary compensation due to the construction works carried out in the vicinity of their plots. The contractor made additional plantings of ornamental vegetation along the retaining wall. After the above-mentioned plantings were carried out, the complaints were not continued.

6. ISSUES OUTSTANDING AFTER LARAP IMPLEMENTATION AND AFTER PREPARING THE FINAL REPORT ON LARAP IMPLEMENTATION.

In line with the *Land Acquisition and Resettlement Framework*, payment of compensation to the court deposit according to an administrative decision of the Province Governor is equivalent to fulfilling the obligation. However, in order to facilitate the collection of funds (compensation) from the court deposit by the entitled persons, additional measures to minimise/support PAPs were introduced during the development of the Final Report on the implementation of the LARAP.

It is the responsibility of the court to inform potential beneficiaries of the deposit submitted according to the provisions of Polish law, however, as far as the information is available, the PIU informs PAP about the status of the case and helps/informs how to collect compensation from deposits.

If the person entitled to receive the deposit is unknown or his or her place of residence is unknown, the court orders to post a notice on the permission for placing the subject of the performance in the court deposit at the court's website and the notice board in the court building, as well as on the notice boards and websites of the municipal and poviast offices of the last place of residence of such person, if known. If the value of the subject of the performance deposited with the court exceeds five thousand zlotys, the court also orders that an announcement be placed in the press.

Furthermore, if the person entitled to receive the deposit is unknown or his or her place of residence is unknown, the court appoints a curator. A trial curator is appointed to undertake procedural actions for a designated civil case within the limits of the powers granted to him or her. The role of the curator is to safeguard the procedural interests of a party who cannot take care of this himself or herself.

6.1. PIU's strategy for court deposits.

Compensations were deposited with the court deposit in 12 cases. In order to publicise the information on the deposits and to assist the entitled persons in taking up the compensation paid from the deposit, the PIU has taken the following actions:

- 1) A detailed list of all properties was prepared with a description of their legal situation and the reasons known to the PIU as a result of which compensation was directed to the deposit (Appendix no. 3).
- 2) In 11 cases the compensation concerned private individuals and in one case the Commune of Sandomierz. Two categories of cases were grouped according to the reason that resulted in compensation being sent to the deposit:
 - a) category I: complete lack of any information about the owner (no address, no personal details, etc.),
 - b) category II: unsettled legal status.
- 3) The following procedure was applied for each category:

- a) category I: a list of properties was prepared for which no owner information is available and the department of the Commune responsible for the assessment of property taxes was contacted; the background to the case was presented and it was agreed that the Commune would inform any person who makes contact with the Commune about a property on the list about a court deposit with the contact being forwarded to the PIU (to the person who will be able to provide full information about the deposit and assist the PAP in taking the funds from the deposit);
- b) category II: letters were sent out/contact by telephone or face-to-face contact was made (depending on the data available to the PIU) with potentially entitled persons and they were informed of the deposit or requested to indicate the persons entitled to receive the benefit from the deposit; they were informed about the need to settle property issues, including inheritance issues; it was proposed, where appropriate, to assist the PAPs in taking funds from the deposit once ownership issues are settled;

6.2. PIU's strategy for compensations for Permanent Restrictions.

In 32 cases in which it was not possible to agree with the property owners on the amount of compensation for damage caused by the Permanent Restrictions in the use of property, the PIU referred applications to the administrative body – the Province Governor of Świętokrzyskie - to determine the amount of compensation. These were cases in which the legal status of the property was unsettled and the persons entitled to compensation could not be determined.

Before referring the applications, the PIU informed owners of the properties with unsettled legal status of the necessity to settle the legal status. It was possible to determine the persons entitled to compensation in 22 cases during the proceedings conducted before the Province Governor of Świętokrzyskie to determine the amount of compensation. Once the decision becomes final, compensation will be paid. As of the date of preparing this Report, the PIU has paid compensation in 21 of 32 cases. In 8 cases, the Province Governor decided it was necessary to direct the compensation in its entirety to the court deposit, and in 2 cases, some of the co-owners of the plot were established and compensation was determined for these persons, while for the part of the plots for which the inheritance proceedings have not been conducted and their legal status remains unsettled, the administrative body ruled on the necessity of directing the compensation to the court deposit. In these cases, the PIU continues to attempt to establish the identity of the individuals by making enquiries to the relevant Commune Offices and posting notices on notice boards. Once the decision becomes final, the compensation will be paid to the court deposit. Information about the deposits will be posted in the form of notices on the court's information board and information boards in the relevant Commune offices.

7. SUMMARY.

The primary, measurable effect of implementing the Works Contract 3B.1 (3B.1/1) Flood protection of Sandomierz is to ensure flood protection for nearly 12,000 people living in the area covering about 1,120 ha. The need was eliminated for incurring immense financial outlays for removal of flood losses. Losses resulting from the 2010 flood in Poland amounted to approx. EUR 2.9 billion. Given the climate change currently taking place, the frequency and intensity of flood events is expected to increase. A one-off investment for the implementation of the said project has therefore enabled to avoid the need to secure huge financial outlays in the coming years to remove the losses.

In addition to the economic aspect, the immeasurable social aspect of implementing the investment is more vital, consisting of ensuring the sense of security for the local community living in the area covered by the investment, as well as meeting the socio-economic expectations of the local population. Hygienic and sanitary conditions in the flooded area deteriorate drastically every time as a result of flood. It is necessary to evacuate people and farm animals to safe areas if very high water levels occur and the threat of damaging the embankments arises. The plots located in areas exposed to flood are less attractive, which determines their low value on the property market. This situation also represents a serious barrier and an unfavourable environment for the development of local entrepreneurship and for potential investors, which translates directly into a limitation of business development. All these public concerns and barriers to development were eliminated or at least minimised following the implementation of the Contract for Flood protection of Sandomierz (Contract 3B.1 (3B.1/1)). Positive social impacts, i.e. benefits for the local community, which are directly related to the investment objectives, should also be highlighted. The long-term benefits encompass:

- reducing/eliminating the risk of flood;
- protection of land and private and public assets, including real estates and arable land;
- psychological comfort of the local community during prolonged heavy rainfall or during the spring melt season (until now, every alert raised the fear of danger to assets and life – the area has been subject to flooding in the past);
- as a result of the tidying up, the landscape has gained new qualities – new recreational areas have appeared (possibility to walk or cycle on the embankment crest or on the service road by the embankment);

It should be pointed out for the direct impact of the Project that 233 properties were subject to acquisition for the benefit of the State Treasury, of which 135 properties belonged to private individuals and the remaining 24 properties to the Local Government Units (Commune). The remaining 74 plots, located in the lines separating the investment area, are owned by the State Treasury and were secured by the Investor for the purpose of construction works carried out.

Contract 3B.1 (3B.1/1) has not resulted in any physical or economic resettlement.

No vulnerable groups were identified in the implementation area of the Contract, and the impact of the Contract itself did not adversely affect the enterprises or the operation of agricultural activities. No impacts occurred in any case, inter alia, loss of sources of income, jobs, accessibility to infrastructure, loss of farming opportunities, loss of enjoyment of natural assets/access to parks, reserves, access to educational institutions, cultural facilities, etc.

Compensations were paid to all landowners who demonstrated their right to the properties acquired for the benefit of the State Treasury – in total, compensation was paid for 159 properties. In the absence of eligible persons (the owner has died and the heirs have not yet carried out inheritance proceedings), the compensation was deposited with the court – in total, compensation for 13 properties was transferred to the court deposit. In the case of real estate subject to permanent restrictions, the payment of compensation is as follows: 46 cases concerning real estate with permanent restrictions were settled on the basis of estimates prepared and protocols signed by the parties agreeing on the amount of compensation; 32 cases were forwarded to the Świętokrzyskie Voivode of which, in 22 cases, during the proceedings, it was possible to determine the persons entitled to compensation, in 8 cases the Voivode ruled on the need to direct the compensation in full to the court deposit, and in 2 cases the co-owners of the plot were identified and the remaining part of the compensation was ordered by the Voivode to be transferred to the deposit. Of these 32 cases, compensation has now been paid for 21 cases.

Detailed information on the payment of compensations is provided in Chapter 2.5.

No requests for purchase of remnants were received by the Investor. Detailed information on remnants is described in Chapter 3.3.

An information point, where complaints and applications could be filed concerning the implementation of the Contract, operated for the entire implementation period of the Contract. Detailed information is described in Chapter 5.

A total of four complaints were received during the execution of the Contract. PAPs also submitted a request (petition) for consideration of additional traffic facilities; each request was considered in accordance with the grievance redress mechanism established in the LARAP, and wherever possible such a request was granted. Details of applications submitted and how they were dealt with are described in Chapter 5.

When the Contract was being prepared for implementation (when individual decisions were applied for), and after preparing the Draft LARAP, public consultation was conducted – this process was held in accordance with World Bank standards and Polish legislation. Detailed information on public consultation is described in Chapter 4.

The rules arising from Polish legislation, World Bank's policy OP 4.12 and the LARAP were complied with during the execution of works. This applied to the acquisition of properties necessary to implement the Contract and to the manner of executing the works, which minimised adverse impacts on project affected persons. The guiding principle of the activities was to achieve the effect of improving or at least restoring PAPs' living conditions, and assuring long-time balanced use of environmental resources within that area. This objective has been achieved and, in the case of the Contract, there are no longer any cases that have not been resolved.

After the implementation of the Contract, PAPs' standard of living has been restored or improved, as appropriate compensation was paid and everyone in the area where the construction works were performed were secured from flooding that could threaten not only their assets but also their lives and health.

The local community living in the city of Sandomierz and the surrounding communes commented positively and appreciatively on the investment. In their view, the executed works will adequately protect the areas from flood. The works conducted did not adversely affect the local population and their assets. In addition, the process of expropriation and payment of compensation proceeded in accordance with the law. Comprehensive information was provided to the local community and mitigation measures were carried out for the conducted flood protection investment.

The key aim of the Land Acquisition and Resettlement Action Plan has also been achieved; the properties necessary to implement the Contract were acquired in accordance with the Polish law and with the World Bank's policy OP 4.12, including the Resettlement Policy Framework, in a way which minimised adverse impacts on project affected persons, and did not result in the physical or economic resettlement of households. There were no significant impacts on PAPs during the execution of the Works. By introducing the actions indicated in the LARAP, life conditions of PAPs have improved and the long-term and sustainable use of natural resources within this area was ensured.

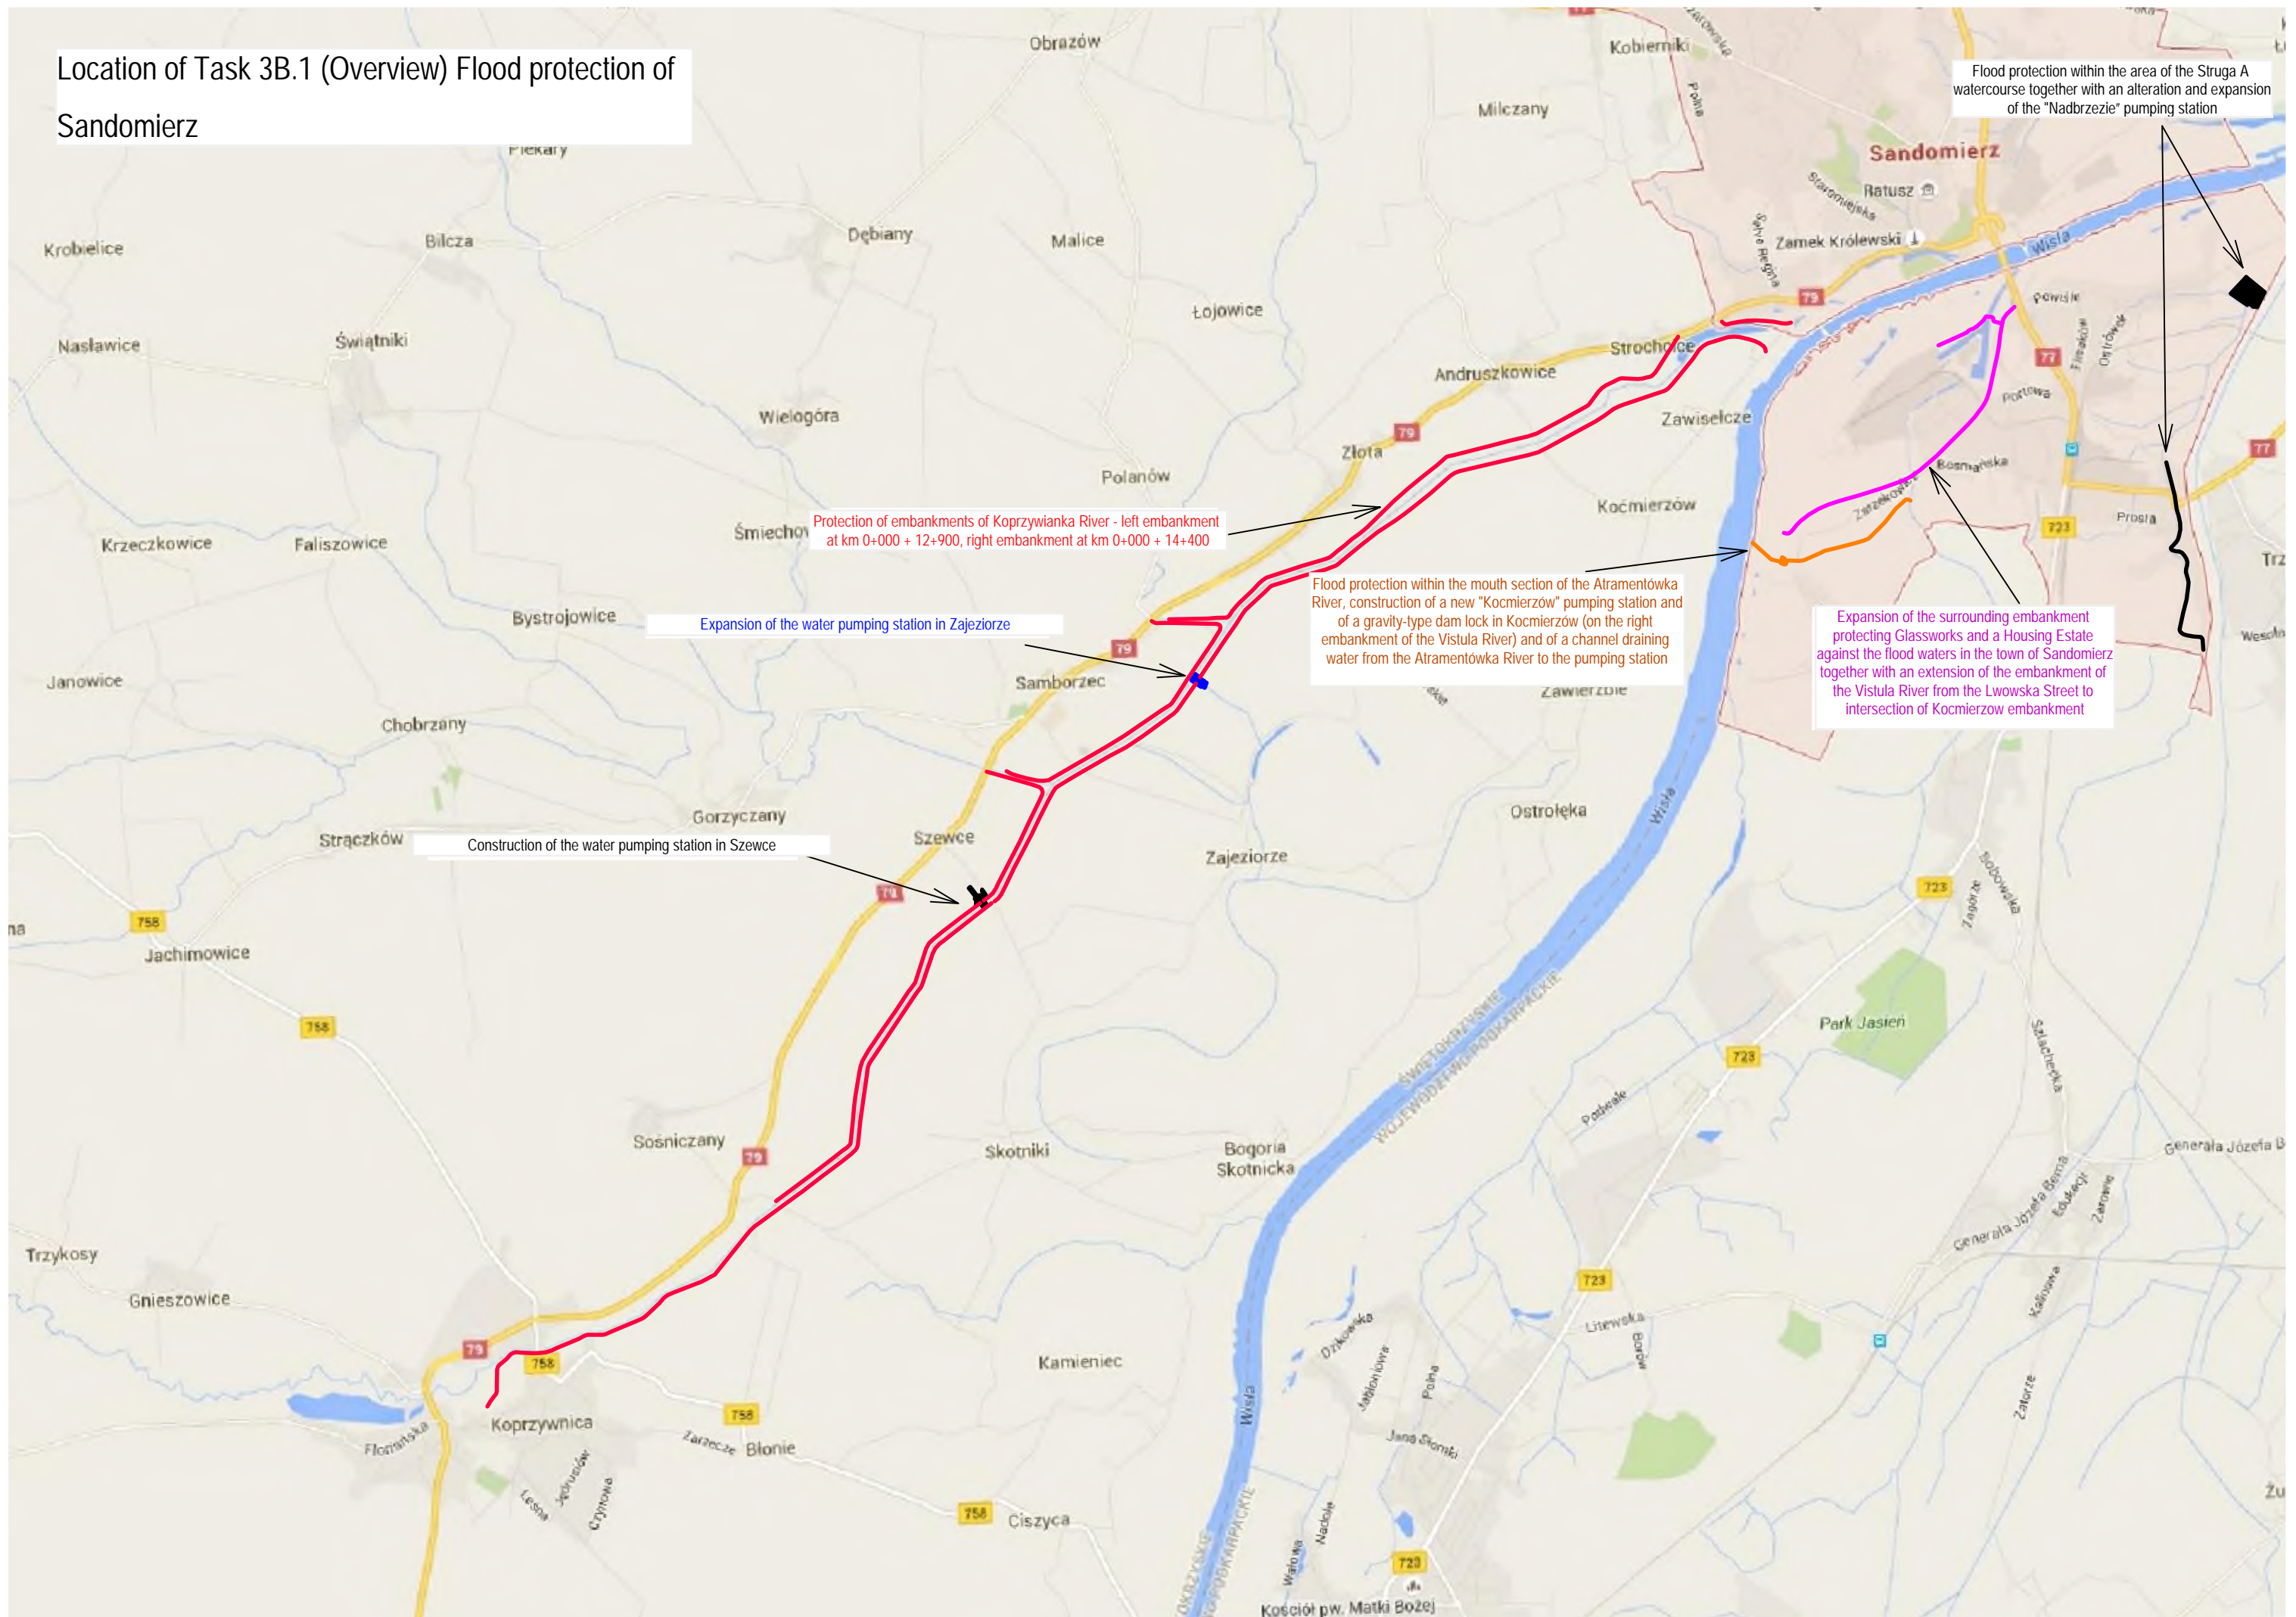

8. APPENDICES.

Appendix no. 1 – Investment location.

Appendix no. 2 – Tabular list of properties and of information on compensation paid.

- Appendix no. 3 – Tabular list of properties and of information on compensation in court deposits.
- Appendix no. 4 – Tabular list of properties and of information on compensation cases processed by the Province Governor of Świętokrzyskie.
- Appendix no. 5 – Documentation of public consultation.

Location of Task 3B.1 (Overview) Flood protection of Sandomierz

Flood protection within the area of the Struga A watercourse together with an alteration and expansion of the "Nadbrzezie" pumping station

Protection of embankments of Koprzywnica River - left embankment at km 0+000 + 12+900, right embankment at km 0+000 + 14+400

Expansion of the water pumping station in Zajeziorze

Construction of the water pumping station in Szewce

Flood protection within the mouth section of the Atramentówka River, construction of a new "Kocmierzów" pumping station and of a gravity-type dam lock in Kocmierzów (on the right embankment of the Vistula River) and of a channel draining water from the Atramentówka River to the pumping station

Expansion of the surrounding embankment protecting Glassworks and a Housing Estate against the flood waters in the town of Sandomierz together with an extension of the embankment of the Vistula River from the Lwowska Street to intersection of Kocmierzow embankment

APPENDIX NO. 2 TO THE FINAL REPORT - LIST OF PROPERTIES FOR CONTRACT 3B.1 - FLOOD PROTECTION SANDOMIERZ
