

Harnessing Remote Sensing For Sustainable Cities

June 17th 2021, Warsaw, 9:30 AM - 4:00 PM (CEST)

REGISTER HERE
and join us virtually!

Today, more than half of the world's population lives in cities. Environmental, social and economic sustainability is essential to improve the urban quality of urban life. Remote sensing data has the potential to make cities more sustainable.

The event will bring together policymakers, data scientists and practitioners from Poland and Switzerland to discuss how data and technology can work together to support urban planners and other stakeholders in developing innovative solutions for smart governance and sustainable public services.
