

Use any device
to pay your toll

**Electronic
toll collection
system
in Poland**

Launch

e-TOLL was launched on June 24, 2021 and replaced the now defunct viaTOLL toll collection system on October 1, 2021.

Satellite based

e-TOLL is based on GNSS (e.g. GPS) for user position location with the use of virtual gates.

All vehicles covered

e-TOLL is used for toll collection for heavy vehicles (>3,5t and more) and light vehicles (3,5t and less).

User choice

e-TOLL users can choose the most convenient method to use the system:

- a free application installed on their mobile device,
- an external location system, factory mounted in their vehicle (ELS) or an On-Board Unit (OBU).

e-TOLL PL app

e-TOLL PL mobile app is integrated with the Polish SENT system, which makes it possible to transmit data simultaneously for toll collection and the movement of tax sensitive goods covered by the SENT system.
