| 111. | Background of borrowing requirements' financing   | 5-10 |
| IV.  | Quarterly supply plan of Treasury Securities (TS) | 11   |
| V.   | Monthly supply plan of Treasury Securities (TS)   | 12   |

### I. MACROECONOMIC SITUATION

Gross domestic product of Poland constant prices, seasonally adjusted data (sa) source: GUS, Eurostat

In the first quarter of 2024, GDP increased by 0.5% (qoq, sa), after stabilizing a quarter earlier. Household consumption increased significantly (by 2.1%), after a decline in the previous quarter. However, investments - after a year and a half of uninterrupted growth - decreased by 3.0% (qoq, sa).

average prices of the previous year (py), yoy source: GUS, MoF own calculation

The annual change in GDP recorded in the first quarter of 2024 (2.0%, py) was higher than that observed in previous quarters. The annual dynamics of private consumption also improved (104.6), supported by a high nominal increase in household disposable income and significantly lower inflation. However, investments decreased on annual basis. Public consumption recorded very high annual dynamics (the effect of high wage growth in the public sector). Net exports had only a slightly positive contribution to GDP growth (0.4 pp), with generally low (annual) dynamics of trade turnover. However, inventories had a significantly negative contribution to GDP growth, although to a lesser extent than in the individual quarters of 2023 (-2.8 percentage points).

### Polish gross external debt position percent of GDP

source: NBP, GUS, MoF own calculation

At the end of the first quarter of 2024 gross external debt reached EUR 400.2bn (51.7% of GDP) and was EUR 11.9bn higher than in the previous quarter. The share of general government sector debt in total debt increased to 28.4%. At the end of April 2024 official reserve assets reached EUR 192.4bn and remained broadly adequate, covering nearly 6 months of imports.

### Current account balance

percent of GDP, in 12-month terms source: NBP, GUS, MoF own calculation

In April 2024, taking into account new quarterly data, Poland's C/A surplus increased to 1.8% of GDP (in 12-month terms). Yearly imports dynamics for the second month in a row was slightly higher than exports dynamics. In addition both dynamics improved significantly compared to March, which to a large extent was the result of a reversal of calendar effects. Primary income deficit in relation to GDP decreased (monthly deficit in April 2023 was much deeper than this year) but remained the main source of the negative contribution to the external balance. Capital account surplus amounted to 0.7% of GDP increasing positive net lending/net borrowing (2.5% of GDP).

### I. MACROECONOMIC SITUATION

#### Harmonised unemployment rate percent, seasonally adjusted data source: Eurostat

The harmonized unemployment rate (sa) amounted to 3.0% in May 2024 and it was at the same level as in the previous month and by 0.2 pp. higher than a year earlier. It was by 0.3 pp. higher than the historically lowest level recorded in January - April 2023. The unemployment rate in Poland is currently clearly lower than the average in the EU-27 and the euro area (6.0% and 6.4%, respectively). In May 2024, among the EU countries, it was lower than in Poland only in Czechia.

#### Monthly indicators of the real sector sold production in constant prices, non-seasonally adjusted (nsa)

source: Eurostat, GUS, MoF own calculation

In May 2024 industrial production i.a. due to a lower number of working days was 1.7% lower than a year ago (nsa). The data were below market expectations. Construction production was by 6.5% (nsa) lower than a year ago. The data were below market expectations. Retail sales was by 5.0% (nsa) higher than a year ago. The data were close to market expectations.

### Inflation

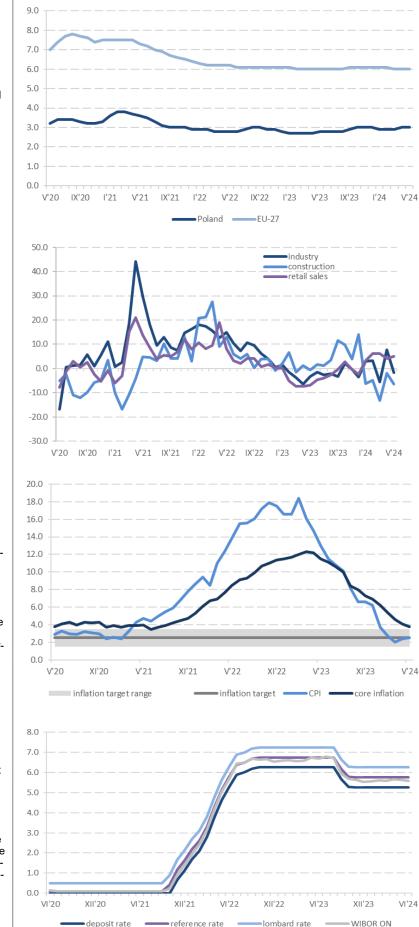

percent, yoy source: GUS, NBP

In May 2024 CPI inflation rate increased to 2.5% (yoy) reaching the NBP inflation target. The annual rate of food and non-alcoholic beverages prices amounted to 1.6% and energy prices were at the previous year's level (0,0% yoy). Core inflation decreased again to 3.8%. According to preliminary data in June CPI rate increase to 2.6%. In May producer prices were lower than a year before by 7.0%. The very low annual dynamics is related to the statistical base effect as well as the former drop of commodity prices on international markets and the strengthening of the zloty.

# NBP interest rates

percent, end of period source: NBP, Refinitiv

In June 2024, the Monetary Policy Council left NBP interest rates unchanged for the eight month in a row. Reference rate was kept at 5.75%, lombard rate at 6.25%, while the deposit rate remained at 5.25%. The Council stated that the decision was driven by uncertainty as to inflation, related in particular to the impact of fiscal and regulatory policies on price developments, as well as the pace of economic recovery in Poland and labour market conditions.
