Interoperability in Poland (policies and regulations)

Mariusz Przybyszewski

Warsaw 27-05-2024

3 legal sources of interoperability

- Integrated State Digitalisation Programme
- Act on the Computerisation of the Operations of the Entities Performing Public Tasks
- Polish National Interoperability Framework

STATE
INFORMATION
ARCHITECTURE

Integrated State Digitalisation Programme

- Strategic document defining the activities of the Council of Ministers in 2019-2024 aimed at the development of Polish public administration using modern digital technologies.
- Reorientation of public administration towards services oriented towards citizen needs.
- State Information Architecture as a formal description of how to organize domain-specific information systems managed by various state institutions
- Interoperability by default.

STATE
INFORMATION
ARCHITECTURE

— Act on the Computerization of the Operations of the Entities Performing Public Tasks

- Definition of interoperability,
- Define the basic elements of interoperability,
- Subjective and objective scope for interoperability (i.e. IT systems and public registers),
- Specific frameworks that require clarification in implementing acts

STATE
INFORMATION
ARCHITECTURE

Polish National Interoperability Framework

- Three key elements enabling interoperability, i.e. uniformity, interchangeability and compatibility,
- Explanation of the different levels of interoperability,
- Reference to data structures for semantic interoperability

STATE
INFORMATION
ARCHITECTURE

— Amendments of all 3 pillars of Interoperability

- In 2024 the Strategy, Act of Computerisation and NIF will be amended,
- Legislative process is ongoing,
- Several new legal changes will be implemented
